

## Anth 151 online Exam format

The exam format for this course is designed around the development of a PowerPoint lecture (if you do not have PowerPoint, you can use Google Slides and save your presentation in PowerPoint Format). While students are not required to present their lecture, each presentation must include detailed notes that explain the key points and graphics of each slide and must discuss and cite the literature from where this information was gathered. Each of these presentations (three in total) is worth 10% of your total course grade (one letter grade). Given the time allotted for each “exam”, students should have little trouble scoring all possible points. Just be sure to adhere to all criteria listed below.

### **Structural Requirements**

- ☐ 15-20 slides (not including title, outline, or references slide)
- ☐ Must include Title, Outline, and References Cited slide
- ☐ Images, tables, graphs on each slide (no text only slides except for title, outline, and references)
- ☐ Key terms must be underlined

The structural requirements are listed above. A 15-20 slide presentation equates to about a 45-minute lecture. Be mindful of your hypothetical audience when building the presentation. Slides that are comprised of large blocks of text are seldom appropriate for lectures. Instead, you should focus on creating concise and impactful bullet points with short sub-point explanations. Deep discussion of the slide content should be relegated to the notes section for each slide.

To help emphasize your key points be sure to underline important terms and add relevant graphics (images, tables, graphs, etcetera) to the slide. As will be the case for most of your content, if the graphic used in a slide comes from a publication you must add the citation. This can be done as a sub-heading for the graphic or be done in the notes section for that slide. That said, images do not need to come from a publication. Just make sure they are relevant.

Finally, it is required that each presentation has a distinct Title slide, Outline slide, and References Cited slide. Be sure that your presentation can check all of the formatting checkboxes above before you submit it.

## Content Requirements

- ☐ Choose a topic from the list below
- ☐ Research the topic using academic literature (textbooks ok but should also reference journal articles)
- ☐ Notes explaining each slide
- ☐ At least three academic references (textbook ok for one)
- ☐ APA citation style (citations only required in notes section)

You are given more than a month for each of these “exams”. That being said, the expectations are high for quality and detail. Students are encouraged to build each presentation as if they were outlining an academic review or research paper. You should therefore include a Thesis Statement (often within an Introduction), at least 3 primary content sections (supporting your thesis), and some concluding remarks. Given that this is a PPT presentation, each of the above-mentioned sections are expected to be covered over a couple of slides.

## Notes section

This portion of your assignment is **important**. Whether using PowerPoint or Google Slides, for each slide there will be a small button at the bottom of the screen that either says “Notes” or “Speaker Notes”. Click this button to open the notes pane. Assume that each slide you create is worth, at minimum, a paragraph of explanation. Notes are required for all slides except the Title, Outline, and References Cited. The purpose of the notes section is to expand and explain the slide content. Given that this is not an essay, I am not worried about the specific tone you use (can be casual) nor will I grade your grammar. What is important is that it provides accurate and relevant content. Be sure to look through the example provided for you on our course website.

Find an example presentation and outline in our Important Documents folder on Lamaku. The presentation is longer than yours needs to be (one of my past lectures for a different class) but it is formatted correctly. I added an Outline and References Cited Slide to complete the build (references slide is blank). The Outline document was placed there to give you an idea of how you might structure a presentation before beginning in PowerPoint.

Exam One list of topics:

- 1) Bipedal theory (what are the proposed theories for why (evolutionarily) our clade adapted bipedality?)
- 2) What led to the expansion of the brain (increased encephalization) in the genus *Homo*? (include discussion of gracile australopithecines)
- 3) Are Oldowan tools really the earliest? (discuss the notion of Behavior before Structure and what the Lomekwian tools are)
- 4) Are there two species of early *Homo*? Are *H. habilis* and *H. rudolfensis* the same or different species? (be sure to discuss sexual, geographic, and/or temporal variation)
- 5) Was *H. erectus* really the first out of Africa? Controversy around the need for longer limbs and the evidence for pre-*erectus* sites in Eurasia
- 6) What is *H. floresiensis*? (should this be considered a different species or a case of island dwarfism? What about *H. luzonensis*? Same or different “species”?)
- 7) What was the nature of Neanderthal/*Homo sapiens* interaction (violent, cooperative, integrated...)?
- 8) Why did *H. sapiens* alone persist through the Upper Paleolithic? Why are we the only existing hominin species?
